The AI Readiness Checklist

Is Your Data Holding You Back or Moving You Forward?

AI is only as good as the data you give it – a truth many organizations miss as they race to add intelligence and automation to their tech stack. If data is locked up in siloed apps and legacy systems, the custom AI chatbots and strategic ML algorithms you're working on could be unreliable. Want to gauge your organization's AI readiness?

Review our checklist to find out if your data platform is up for the challenge.

Are you using all your data for AI development?

- Everything that's stored in public and private clouds
- Structured data from business systems and legacy platforms
- Unstructured data like audio, videos, images, and documents

Is data management simple and streamlined?

- Consolidate and prepare data for AI with minimal effort
- Apply the same interoperable tools and processes everywhere
- Keep management costs low and productivity high

Are you automating workflows?

- Optimize efficiency by automating time-consuming tasks
- Move workloads as needed without refactoring them
- Reduce your reliance on multiple data platforms

Do you have a data governance strategy for AI and analytics?

- Support data quality for maximum AI impact
- Continuously maintain consistent user access rules
- Protect sensitive data and IP in compliance with industry standards

If your data platform doesn't check the boxes, it may be time for a refresh. Cloudera is the only True Hybrid platform that's built for AI and analytics. Unify and prepare data for seamless, secure deployment of AI models and applications wherever they're needed. Visit our website to get started.
