Company Overview

Datameer is changing the way companies do business by enabling them to get faster insights and better, more trustworthy decisions and actions to gain more value from their data. Leading companies, including Anthem, BT Openreach, Citibank, Dell, TIAA, and Vivint, use Datameer’s modern analytic data platform to transform complex, diverse data into a governed enterprise-wide network of data pipelines that feed your analytics initiatives.

Product Overview

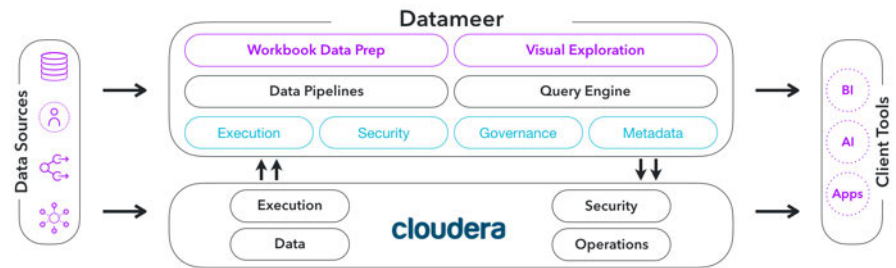

Datameer helps organizations gain the maximum value from their data by creating secure, scalable and accessible business data pipelines that connect users to the data they need when they need it. Datameer offers a complete platform for data ingestion, preparation, enrichment and exploration that simplifies and accelerates the time-consuming, cumbersome process of turning complex, multi-source data into valuable business-ready information.

Datameer Enables Agile Business-driven Data Pipelines for Faster Time to Insights

Data is fueling the new economy and data-driven organizations clearly outpace their competitors. Digital transformation, customer-centricity and operational efficiency are all enabled by accessible data warehouses, with faster, deeper data pipelines that create smarter insights.

Traditional approaches to delivering data were IT-heavy, forcing business teams to wait weeks or even months for access to new data that answered new questions. Slow, cumbersome, and complex one-off data delivery processes delayed delivery of meaningful information to the business.

Datameer and Cloudera combine to help organizations create a fast, flexible enterprise wide data strategy that effectively secures, governs and manages data, and provides the agility and scale to deliver the right data at the right time across the organization. The Cloudera platform provides scalable compute and storage power and enterprise-class data services for managing large volumes of diverse data. Datameer helps create and manage a governed network of data pipelines that transforms this complex, diverse data into consumable information that feeds any analytics initiative, leveraging the power of the Cloudera platform. The result is a scalable, well-managed data warehouse that delivers exponential value to the organization.

Solution Highlights

- End-to-End platform covering the complete data lifecycle
- Enterprise-grade features for scalability, security and governance
- Intuitive business ready tools with powerful functions
- Agile, schema-less data and pipeline modeling
- Interactive interface with visual data profiling for iterative preparation
- Visual data exploration over any attribute, value or metric

Unique Capabilities

Complete (End-to-End) Business Data Platform

Datameer offers a platform that covers the full data lifecycle from integration to preparation to consumption. It is a single platform that works with ANY data source, in ANY location (on-premise, in the cloud or hybrid) and with ANY BI or data science tool.

Scalable & Secure Enterprise-grade Platform

Datameer delivers an industrial-grade platform that is trusted by some of the largest organizations with stringent regulatory requirements. Datameer is the proven leader for high-end scalability and performance, strong data security, and deep governance.

Intuitive, Business-ready Interface

The easy to use Datameer tools make it ready for business analysts to create their own customized data pipelines unique to their analytic needs. An interactive spreadsheet style interface with over 270 powerful functions, rapid data-modeling and visual data profiling speeds the creation of rich analytic data pipelines.

Easy Discovery & Exploration

Datameer enables fast, easy data exploration to find insights and patterns hidden deep in large volumes of data. It offers visual exploration at the speed of thought on extremely large datasets, unconstrained exploration over any dimension, value and metric, and integration with popular BI and data science tools.

About Cloudera

At Cloudera, we believe that data can make what is impossible today, possible tomorrow. We empower people to transform complex data into clear and actionable insights. We are the leading platform provider for machine learning, analytics and data management built for the cloud. The world's largest enterprises trust Cloudera to help solve their most challenging business problems.
