Company Overview

Qlik is a leader in visual analytics. Approximately 43,000 customers rely on Qlik solutions to gain meaning out of information from varied sources, exploring the hidden relationships within data that lead to insights that ignite new ideas and data-driven decisions. Headquartered in Radnor, Pennsylvania, Qlik has offices around the world with more than 1,700 partners covering more than 100 countries.

Product Overview

Unique in the market, Qlik's data analytics platform includes data sourcing and preparation, visual analytics, reporting, collaboration, and mobility — all in an open architecture that adapts to changing business needs. Through self-service data visualization and guided, embedded analytics, you have the power to enable every user to do their jobs smarter and faster.

Solution Highlights

- Widest range of possibilities for connecting to Cloudera via Impala, Hive, or Kudu
- Prebuilt ODBC connectors and 3rd party connectivity options
- A modern BI environment that facilitates discovery
- Qlik's associative model ensures users are not limited by predefined data hierarchies

Driving higher ROI with Cloudera and Qlik

Using Qlik® solutions with Cloudera enables organizations to optimize the ROI from their big data investments while ensuring the value of analytics isn't restricted to only elite data scientists. Qlik empowers every user across the organization to collaborate and make sense out of their data.

Accelerate Data-Driven Decisions

Qlik and Cloudera make it easy to extract and analyze any kind of data to help organizations make data driven decisions. Qlik's Associative technology was designed specifically for interactive, user-driven analytics; allowing users to probe all possible associations that exist in the data, across all data sources. This in turn drives analytics use up across the organization, creating an analytics culture and increasing your ROI.

End-to-end Big Data Analytic Use Cases

Qlik and Cloudera provide end-to-end support for many Big Data analytic use cases out-of-the-box such as market basket analysis, fraud detection and 360 degree view of customer activity. Qlik's platform approach delivers visual analytics solutions to every user; regardless of whether it's for self-service data exploration, guided analytics and dashboards, embedded analytics, custom built analytic applications or collaboration and reporting.

Easily manage a constantly changing environment

Qlik and Cloudera can easily scale to handle more users, more data, more servers and more analytic apps. Qlik scales predictably and linearly as more users are analyzing larger data sets. And Qlik's governed self-service framework and flexible rules engine enables administrators to easily fine tune individual user privileges and provide different self-service capabilities to different user groups.

Cloudera Enterprise Benefits

Stores and Analyzes Any Type of Data

- Leverage the full power of your data to achieve pervasive analytics, increase business visibility, and reduce costs
- Bring diverse users and application workloads to a single, unified pool of data on common infrastructure; no data movement required

Enterprise Approach

- Compliance-ready perimeter security, authentication, granular authorization, and data protection through encryption and key management
- Enterprise-grade data auditing, data lineage, and data discovery

Industry-Leading Management and Support

- Best-in-class holistic interface that provides end-to-end system management and zero-downtime rolling upgrades
- Open platform ensures easy integration with existing systems
- Open source to achieve stability, continuous innovation, and portability

Benefits of Qlik

Faster, Scalable Analysis

- Thanks to the QIX engine, you can enjoy a super-fast experience, even while freeform exploring.

More Exploration, Less Restrictions

- Automatic associative indexing: the QIX engine ingests data from multiple sources, maps it, and automatically maintains associations in the data.
- The power of gray: sometimes the most interesting insight is the data that isn't related to your current analysis. The QIX engine automatically highlights this data in gray to aid discovery.

Mobile Done Right

- Qlik lets you build once for any device, then deploy anywhere, on any device. Responsive design adapts on the fly to the device's form factor and interaction method.

A Platform to Build On

Customer Snapshot: King.com

As one of Europe's biggest gaming companies, King.com needed a way to see the patterns in the massive volumes of data their game players were generating. King.com's games generate more than 2 billion rows of data daily—with volumes increasing every day. Hidden in this sea of data were the secrets to game replayability, customer retention, and understanding the effectiveness of marketing campaigns.

Before Qlik, King.com's business analysts had no easy way to tap into the value of all this data, which was stored in Cloudera CDH. Marketers had to ask game developers to write scripts to track things like the number of games played per channel.

With Qlik, business analysts at King.com are now able to analyze 40 million customers' gaming behavior. For the first time ever, they are able to determine the ROI of their marketing campaigns. Now they have visibility into metrics—such as the number of players, number of games played, amount of time played, daily average revenue per user, continuous second-day retentions, daily and monthly active users, and more. In addition, "Qlik has cost us only 20 percent of the price of alternative solutions. The payback period was just a few months," said Mats-Olov Eriksson, Data Architect at King.com.

Customer Snapshot: Children's Healthcare of Atlanta (CHOA)

Children's Healthcare of Atlanta is one of the largest clinical care providers for children in the United States, managing more than half a million patient visits annually at three hospitals and 16 neighborhood locations. They offer access to more than 30 pediatric specialties.

Georgia Tech, in a clinical study together with CHOA, wanted to leverage historical and granular data from vital-monitor data—including heart rate, blood pressure, respiratory rate, and oxygen saturation—from Children's Pediatric Intensive Care Unit (PICU) to understand what, if any, effect the environment of care—such as noise and light—had on patient vital signs. With that information, caregivers could improve the environment by instituting quiet hours, moving noisy machines, or redesigning care areas to improve the environment of care.

Data sources that had never been merged before were now merged on Cloudera. Qlik was brought in to analyze revenue management, service line spending, research hypotheses and cost effectiveness. The result is that patients are not released until their stress has returned to normal. The result was reduced reporting time by more than 65% and elimination of a 10-day waiting period for research-related queries.
